

BLAST CABINETS

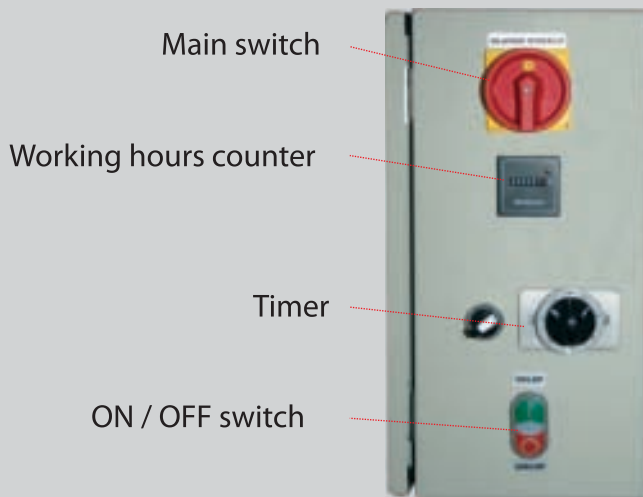

DRUMBLAST 1 DV -15

Sandblasting machine for cleaning sandblasting deburring of small parts in rotating basket.

Small parts are loaded in the basket and are sandblasted by an abrasive jet. The basket rotates with a constant speed and after the preset time it stops. The drum is then taken out of the machine for unloading the parts and loading of new ones.

Drum is available in diameter of 300 mm, depth of 250 mm and load capacity of 10 kg. Blasting gun is movable and allows different types of nozzles.

The blast cabinet is always connected to a filter-recycling unit from our CENTRO series. Before making your decision, you are welcome to contact our team of experts for free consulting and we can assure that with our more than 45 years of experience you will get the right technology and the best equipment to solve your problem.
